2006 ANNUAL REPORT

Volume 2 – Statistical Annex

STATISTICAL ANNEX

STATISTICAL ANNEX

138. Table 7 provides details of how the data in table 1 in the main report was arrived at. In order to obtain estimates of aid and ODA comparable in coverage with those normally presented, by the OECD-DAC $80 million were added to the survey results as a block allowance for ODA commitments by smaller donors in 2005, and $30 million for 2006. OECD-DAC records indicate that in recent years some 5-10% of total ODA for African infrastructure has come from the bilateral programmes of 6 European countries which were not directly covered by our survey (Belgium, Denmark, Ireland, Netherlands, Spain and Switzerland). Annual commitments from these six countries together ranged in the last few years between $160 and $400 million, though the latter figure may have been affected by debt write-down agreements.

9 - These two items – IDA and (Country) Trust Funds, in the ODA category, and World Bank and IFC, in the Non-concessional category – are not distinguished in the database which has only one column for all funds and bodies under the aegis of the World Bank. General World Bank project lists were used to separate out the very few regular operations in Sub-Saharan Africa which are not IDA-financed, and IFC web-site and press releases were used to identify the comparatively few infrastructure-related operations that IFC undertook in Africa in these years.

10 - This was a contribution to the Emerging Africa Infrastructure Fund by KfW

11 - Estimated disbursements related to infrastructure in Africa, per DFID's response to ICA questionnaire.

12 - A conservative figure, based in CIDA's response to ICA Secretariat questionnaire

Notes on Financial Flows to Africa for Infrastructure 1995-2005

139. Table 8 summarises the investment inflows generated by infrastructure projects developed with private capital and concessions. Private capital therefore predominates, but the figures are not limited to that since funds from aid donors and international financial institutions sometimes play an important part in enabling a transaction to proceed and are also included in the World Bank's PPI database as investments committed for privately financed projects.

140. The most comprehensive source of information on bilateral and multilateral flows is the OECD-DAC database and, in particular, its coverage of ODA (Overseas Development Assistance) Trends have been substantially different between North Africa and Sub-Saharan Africa and are therefore treated separately.

141. Table 9 depicts the evolution of aid flows for infrastructure to North Africa over the last ten years. The overall volume of aid has been about the same in nominal terms in recent years as ten years ago. Most continues to be provided by the European Union and some of its member states. With time the USA and Canada have become less important supplementary sources. Japan has been a substantial contributor throughout the period. More aid has gone to the Water and Sanitation sector than to any other, but in recent years aid has been distributed

almost equally between this sector, energy and transport. Infrastructure has normally accounted for about 25% of overall aid inflows into the countries, but for a much higher proportion of assistance from Japan.

142. Aid flows to Sub-Saharan Africa are of course much greater, and the OECD-DAC detailed sectoral data that are available through 2004 show some signs of increased support for infrastructure. Table 10 indicates that aid from OECD countries for infrastructure rose in 2004 for the first time well above $4 billion, and that the three main multilateral sources – the European Commission, IDA and the African Development Fund – had all achieved significant expansion of activity in recent years.

143. Infrastructure's share in overall aid flows has been lower than earlier but this appears to reflect recent progress on debt problems and the consequent addition of debt reductions agreed to the figures of aid volume. The aggregate of EU members' bilateral support for African infrastructure has tended to fall over the decade, but this is partly due to transfer of a significant share of this responsibility to Brussels, and the development of a major aid programme by the European Commission. On the other hand, aid from Japan for African infrastructure diminished between the first and second halves of the 1990s, due to reduced overall aid flows to Sub-Saharan Africa as well as reduced share devoted to infrastructure. Aggregate support for infrastructure from minor sources of aid (here treating contributions of all sorts from EU member countries as components of one of the major sources of aid) has continued to run about $100-

150 million p.a. throughout the period, with Norway, Switzerland, USA and Canada being the principal contributors.

144. The inter-sectoral distribution of aid for infrastructure is substantially different from the pattern in North Africa, with a much higher proportion understandably going to transport but somewhat surprisingly low shares devoted to energy. Expenditures for the ICT sector have fallen

substantially over the decade, reflecting the increased responsibilities taken on by the mobile-phone operators and the time required to develop appropriate public-sector responses to the opportunities opened by recent rapid progress in these technologies more generally. The 2004 figures show a noteworthy large increase in overall flows to the Water and Sanitation sector.

145. The aim of tables 13 to 28 is to list all commitments for infrastructure made for each country in question that were made in 2005 and 2006. Tables have been prepared for each of the four sectors used throughout this report – Water and Sanitation, Energy, Transport and ICT. The table for each year is in two sections; the first covers contributions from ICA members (and the public sector of the recipient country), and the second, contributions from other known sources.

146. Projects for which essentially all the works are planned/executed in one country are listed under that country only. Any projects directly involving activities in more than one country are listed at the end of each table in a separate section headed "Regional Projects," distinguishing among Africa's different geographical regions, and also showing the countries involved in each project.

147. Some projects related to more than one infrastructure sector and were categorised in the sector for which the largest expenditures were to be made, or the greatest benefits should accrue. Those projects or loans from banks only partially linked to improving roads or water supplies (e.g. broad-based rural development projects), were not included in tables 13 to 28.

About the ICA

The Infrastructure Consortium for Africa (ICA), a Gleneagles G8 commitment, is a major new effort to accelerate progress to meet the urgent infrastructure needs of Africa in support of economic growth and development. It will address both national and regional constraints to infrastructure development, with an emphasis on regional infrastructure, recognising the particular challenges at this scale. However the Consortium will also engage at the country level, since most infrastructure services are addressed at the national level, within national budgets and implementation frameworks, and issues of harmonisation also need to be addressed at this scale.

The Consortium is a tripartite relationship between bilateral donors, multilateral agencies and African institutions, intended to make its members more effective at supporting infrastructure in Africa by pooling efforts in selected areas (such as information sharing, project development, and good practice). Although ICA is not a financing agency, the Consortium would act as a platform to broker more donor financing of infrastructure projects and programmes in Africa. The success of the Consortium will be judged by concrete action and outcomes, in terms of the quantity and quality of sustainable infrastructure services delivered to Africa's people, and the resultant development benefits.

To underpin the work of the ICA a Secretariat located in the African Development Bank has been established. Through the Secretariat, the Consortium collaborates closely with the African Union, its NEPAD programme, the Regional Economic Communities and the AfDB.
